

Vacancy - Clinical Data Analyst

Tim Bruines - tim@sensible.health

About Us

At Sensible Healthcare Systems, a Dutch company developing the connected biosensing platform of the future, we are on a mission to bring actionable insight into our own biology to hundreds of millions of people worldwide through our revolutionary biosensing platform.

Our focus today is on the development of our first product, idi one, a minimally invasive continuous glucose monitoring system (CGM). To realize that mission, we are excited to bring on board a Medior Data Analyst to support our R&D teams with structured analysis of our diverse data streams and drive our data-driven learnings forward.

Job Description & Responsibilities

We are looking for an enthusiastic young professional looking to develop rapidly in their data science/analysis career. The position comprises a large degree of autonomy and entails several responsibilities in data analysis, including:

- Maintaining and expanding our shared Python libraries for data filtering, calibration and visualization, and improving how we plan and coordinate data analysis activities across the team.
- Ensuring all test and study data is continuously fed back into our engineering activities in the form of clear, actionable insights.
- Performing systematic studies of internal and external data to gain learnings for our R&D teams.
- Preparing and presenting data findings to the broader team in a clear and structured way.

Your Qualifications and Skills

Must-have:

- 2+ years of experience in biomedical data analysis.
- MSc in Data Science, Technical Medicine, Biomedical Engineering or similar.
- Demonstrated projects showing experience with complex data analysis and presentation.
- Proficiency in Python, including development of reusable analysis tools and libraries.
- Experience with systematic literature studies.

Desirable:

- Experience in algorithm development/optimization.
- Experience with database technologies such as SQL and MongoDB.
- Proficiency in C++, Go, and/or Rust.
- Experience with class II+ medical devices or adjacent regulated environments.
- Experience with clinical studies.

Due to the highly regulated nature of medical devices, and the unique energy of working in a startup environment, candidates with previous experience in these sectors will be prioritized. **However, if only a couple of the above requirements are missing in your profile and you believe this position would be an excellent fit nonetheless, do not hesitate to apply!**

What we Offer

We offer the chance to join a young and talented team in its effort to develop an innovative biosensing platform based on 10+ years of previous R&D. This technology has the potential of reaching a huge and expanding market, with the possibility to revolutionize the way we gain insight into our own biology.

We offer a competitive salary in the startup market, as well as a personalized benefits package. This position is also a fast track to valuable experience as it comprises a high level of autonomy and opportunities to learn technical and management skills.

How To Apply

We encourage all suitable candidates to apply, and all qualified applicants will be equally considered for employment.

Please apply through the web form at sensible.health/careers.
